PROFESSIONAL SUMMARY

I previously worked as a full stack developer at Origami Lab, building a work-order management system for the rail sector (Node/Express/Prisma API, Next.js admin dashboard, React Native/Expo mobile field app, and tracking portal). I recently completed my tenure there to focus on building my own products, like VORTEX OS and Enemza, and I am available for new software engineering contracts and full-time roles.

I work from a system, not from memory: the decision is written before the code, the domain is typed rather than commented, and when theory and code disagree, the code wins.

TECHNICAL SKILLS & STACK

Languages & Core
TypeScript · JavaScript (ESNext) · Node.js · SQL · HTML5 / CSS3

Front-end & Mobile
React 19 · Next.js 15 · React Native · Expo · Tailwind CSS

Back-end & Databases
Express · Fastify · Prisma ORM · Supabase (RLS) · PostgreSQL · Drizzle

Architecture & Testing
Domain-Driven Design (DDD) · Clean Architecture · Vitest · Docker · CI/CD

EXPERIENCE & KEY SYSTEMS

VORTEX OS — Accounting ERP (tax, payroll and bookkeeping)

2026 — hoje

Own project / SaaS

High-density web ERP for accounting firms: tax, payroll and bookkeeping in one system. Modern architecture featuring NF-e/NFC-e XML and SPED Fiscal parsing, tax calculations, P&L generation, multi-tenant per-office segregation via Supabase Row Level Security (RLS), and domain auditing.

- Supabase persistence with strict per-office RLS isolation
- Automated processing and reconciliation of fiscal XMLs and SPED
- Typed domain models with automated test suite in Vitest

`Next.js` `TypeScript` `Supabase` `PostgreSQL` `Tailwind CSS` `Vitest`

Enemza — study PWA for Brazil's national exam (ENEM)

2026

Own project

Curated YouTube lessons organised by module, practice tests (official INEP questions + LLM-generated ones with a mandatory double-check) and markdown notes. Progress through personal XP and levels, no leaderboard. Integrated checkout and payment webhook.

- Architecture decisions recorded as ADRs before implementation
- Custom auth with scrypt and HMAC-signed cookies

`Next.js 15` `TypeScript` `Prisma` `PostgreSQL (Neon)` `PWA` `Gemini` `Vitest`

COLAÍ — an app to break into closed circles (in progress)

2026

Community SaaS

Mobile app for young people in Formiga and the surrounding region: each get-together declares how many seats it opens to outsiders, and outsiders can ask to join without the awkwardness. Map of events, solo or +1 requests, address unlocked only after the host accepts.

- In development — v0 scope defined before the code
- Data isolation with enforced RLS and geolocation via PostGIS

`Expo` `React Native` `TypeScript` `Supabase` `PostGIS` `MapLibre`

Work-order management for the rail sector

2025 — 2026

Origami Lab

System for tracking work orders and daily field construction reports in the rail industry, featuring digital signature, review, and inspection workflows. Worked as a full stack developer on the backend API, admin dashboard, mobile field app (React Native/Expo), and tracking portal.

- Web and native mobile sharing the same unified API contract
- End-to-end digital signature and inspection workflows

`Node` `Express` `Prisma` `PostgreSQL` `Next.js` `React Native` `Expo`

Custom systems for small businesses

2024 — 2025

Freelance

A period building custom systems before going full-time. The artefacts stayed with the clients, so this counts as trajectory, not showcase.

`TypeScript` `Node` `React`

Dobra SaaS — body composition assessment

2026

Own project

Body fat from skinfolds for health professionals. Three protocols, three conversion formulas, ten measurement points — all as a typed, tested domain rather than a spreadsheet dressed as an app.

- The formula without a verified primary source warns on the selector itself
- Classification bands from a single source, impossible to diverge across screens

`TanStack Start` `React 19` `Supabase` `PostgreSQL` `Vitest`

Sales bot with instant-payment checkout

2026

Own project

A Telegram sales bot with instant-payment (Pix) checkout, containerised with Docker and ready to deploy.

- Automated tests with Vitest and a reproducible environment via docker-compose

`grammY` `Fastify` `Prisma` `PostgreSQL` `Docker` `Vitest`

Bancada — a test bench for AI agents

2026

Own project

Runs the same task N times, measures variance rather than just pass rate, grades deterministically and keeps a replay of the exact run. Everyone writes agent guidance; almost nobody measures whether it works.

- Variance as a first-class metric

`TypeScript` `Next.js` `Drizzle` `Vitest`

FOUNDATIONS & METHODOLOGY

I came into tech out of curiosity and through family. Four years of studying before it became a job, and curiosity is still what makes me open the editor.
